

# Standard & Poor's increases productivity by 30 % with empower®

“ We always refer to empower® as the »Gold Standard« of how Office products should be developed.”

Alyssa Le, VP Business Development

**STANDARD  
& POOR'S**

## Challenge

As with all companies in the financial industry, S&P creates a massive amount of content using PPT. They wanted to reduce the time spent on creating and formatting presentations as well as ensuring compliance and review paths for all changes.

## Solution

S&P implemented empower® for 10,000 users with its central content library and all its tracking functions. The productivity functions made typical tasks like creating and updating tables of contents, applying table and chart styles to Excel-based data child's play.

## Result

Since the implementation of empower®, the productivity of the users has gone up by 30% on average, freeing up a significant amount of time that now can be used for more important tasks like the analysis and conclusions of data.
